Head of Product with experience leading large distributed teams (70+) and building AI/ML platforms: speech technology (STT/TTS) and video analytics / surveillance. Managing full-cycle ML teams — research, training, productization. Focus: product strategy and growth, P&L management, scaling teams and planning processes, improving quality and delivery predictability.

EXPERIENCE

MWS AI (ex. MTS AI)

Mar 2023 — present

Head of Product — Audiogram STT/TTS platform

- Set the product vision and rebuilt the roadmap around it; introduced quarterly planning combining bottom-up team input with top-down stakeholder goals
- Led a distributed team of 70+ (about half ML engineers) across research → training → productization; cut it to 25 with no loss of output — through sharper focus, less bureaucracy and a bet on strong performers
- Built one of the market's best Russian speech recognition: an ensemble of models per surface, telephony focus, WER <10% on real-world audio
- Speech synthesis at MOS >4.3, on par with global leaders; launched an anti-spoofing product (synthesis detection, EER ~1%) and shipped KWS (keyword spotting) to production in 2 months
- Took Audiogram to the external market — first direct and partner sales (figures under NDA)
- Earlier ran Tenvision (a video-surveillance and video-analytics platform, ~30 staff, full cycle): 99.95% SLA, 3x active cameras (5k→15k/day), annual roadmap delivery from 30% to 100%; closed the product after a shift in group priorities

DSSL

Sep 2021 — Mar 2023

Lead Product Manager — TRASSIR VMS

- Led development (30+ engineers) and product direction for TRASSIR VMS; raised engineering transparency and moved the team to quarterly planning
- Delivered a paid 32→64-bit product upgrade on a conservative security market — with no drop in partner or customer tNPS
- 16% profit growth in a mature product — roughly 3x the market average
- Built a multi-period roadmap from market analytics; laid the groundwork for domestic-OS support and b2g entry

ITV

Sep 2019 — Mar 2021

Product Manager — cloud video surveillance platform

- Owned a cloud SaaS video-surveillance platform and its partner-led (b2b) growth; defined the product vision
- Market and competitor research; identified growth opportunities
- Designed the pricing policy, licensing and price list; set up the business processes around the product
- Generated and tested product hypotheses with active custdev; ran a matrixed engineering backlog

Videoglaz Proekt

Apr 2016 — Apr 2019

Managing Director, Business Unit

- 3x revenue and profit growth from baseline; contributed to company strategy
- Built and led a full-cycle team of 40+ — from design to support
- Owned the unit's key metrics: budgeting, budget control, regular P&L work
- Built a tender department from scratch that generated over a third of company revenue in its first year

EDUCATION

Stavropol State University, Stavropol — Faculty of Physics and Mathematics, "Information Security Organization and Technology", 2012.
